Transformers, Bells and Socket Outlets

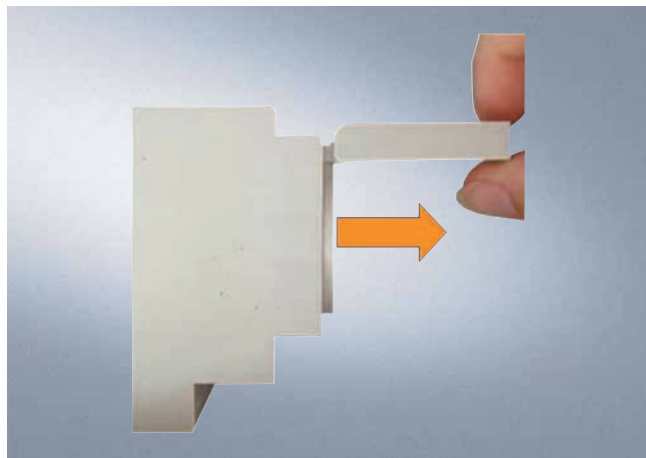

Socket outlets

More information

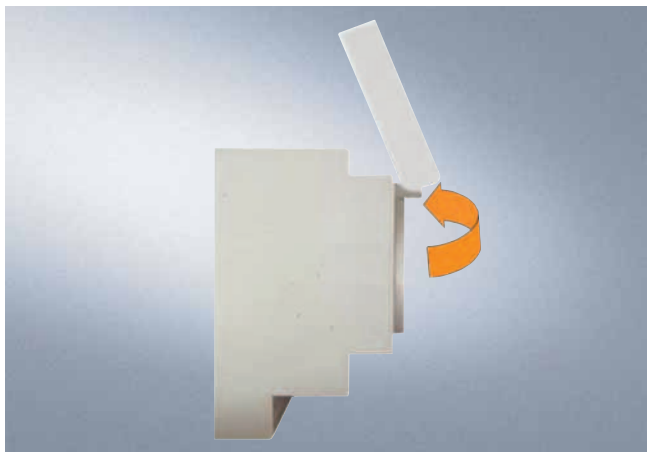

Hinged lid for simple application

The hinged lid can be opened at an angle greater than 180 °.

By pulling on the hinges, the covers stay open, which facilitates plugging in. The hinged lids can be retrofitted on all versions.

In order to make sure that it is possible to work on the distribution board in the event of a power failure, we recommend that the infeed socket outlet is fed using a short-circuit current proof cable installation and a separate fuse. The yellow socket outlet must be used for this purpose.
